

Mohamed Moheyeldin

Bridging customer needs and technical solutions.

Reston, VA 20191 | mohamedmoheyeldin.com | mohamedmoheyeldin.jobs@gmail.com | linkedin.com/in/moheyeldin | github.com/mohamedmoheyeldin

Professional profile

Customer-focused engineer with 11 years of software development and quality engineering experience across federal, banking, and e-commerce environments. Connects business requirements with hands-on implementation, system integration, and technical troubleshooting. Works directly with stakeholders from discovery and acceptance criteria through demonstrations, feedback, and adoption. Contributes React application features and develops tools such as Data Generator & File Processing to simplify complex workflows, combining engineering execution with practical customer delivery.

Works directly with stakeholders to clarify requirements and acceptance criteria, evaluate technical constraints, demonstrate changes, and help teams adopt reusable tools. Hands-on experience spans React, TypeScript, JavaScript, Java, SQL, REST API validation, and CI workflows. Uses AI coding assistants for development, debugging, and refactoring.

Professional experience

Booz Allen Hamilton — Washington, DC

QA Test Engineer | Dec 2020 – Present

Customer: U.S. Department of Veterans Affairs (VA)

Contribute to a VA healthcare claims platform with two frontends sharing a database, supporting claim submission, provider updates, claim progress and status tracking, and payment visibility.

- Work directly with VA stakeholders to map healthcare claims workflows, clarify technical and operational constraints, and define requirements and acceptance criteria for application and tooling changes.
- Independently built and continue to enhance Data Generator & File Processing, enabling QA users to generate, edit, and upload hundreds of referrals in minutes to VA lower environments.
- Contribute frontend features using React, JavaScript, and TypeScript; translate stakeholder feedback into application improvements supporting claim submission, provider updates, and status visibility.
- Implement referral-data uploads into VA lower environments and use MySQL to investigate discrepancies between application behavior and stored data across frontend and backend workflows.
- Demonstrate application, file-processing, and automation enhancements to stakeholders, gather feedback on daily workflows, and refine implementations around user needs.
- Evaluated alternatives to legacy automation and helped select Playwright, weighing maintainability, reusable components, authentication requirements, and restricted environment access.
- Develop a reusable Playwright smoke and regression framework and use GitHub Actions in development and testing workflows; investigate Microsoft Entra ID and environment dependencies affecting execution.
- Maintain Data Generator & File Processing for daily QA use, troubleshoot issues, and adapt functionality as testing needs change; document single and bulk referral uploads and framework usage to help teammates adopt and extend the tools.
- Coordinate with VA stakeholders and developers to investigate defects and resolve delivery dependencies; document progress, blockers, and operational impact in Jira.
- Use GitHub Copilot in VS Code for application development, debugging, refactoring, and test creation; use Gemini, GPT models, and Claude in broader development work to explore implementation approaches.

Professional experience continued

Chick-fil-A Corporate — Atlanta, GA

Software Engineer in Test | Nov 2018 – Dec 2020

Supported application delivery by connecting user workflows, REST APIs, authentication, and AWS test environments through reusable engineering tools and actionable troubleshooting evidence.

- Built reusable JavaScript browser automation around application workflows, translating expected behavior into repeatable checks that supported implementation and release decisions.
- Investigated application-to-service integration through browser automation and Postman REST API checks, validating schemas, service contracts, and data-dependent behavior to surface discrepancies.
- Validated OIDC, Okta MFA, and SSO workflows, troubleshooting authentication behavior across application scenarios and capturing evidence for failure investigation.
- Connected GitHub Actions and AWS test environments into repeatable delivery workflows, making execution results and diagnostic artifacts available to engineering teams.
- Used AWS EC2, S3, and Aurora resources to support test environments; combined network stubbing, headless testing, and parallel execution to isolate dependencies and reproduce scenarios.
- Investigated user-facing issues across browsers, devices, and resolutions with AppliTools Eyes and browser automation evidence, using screenshots, videos, retries, and run durations to trace failures.

Ally Bank — Sandy, UT

Software QA Engineer | Sep 2015 – Nov 2018

Partnered with developers, analysts, and product owners to turn banking requirements into traceable validation and release-readiness evidence.

- Translated business and functional requirements into test plans, acceptance criteria, and traceable scenarios with developers, analysts, and product owners.
- Performed exploratory, functional, and regression testing of banking web applications, investigating behavior across customer workflows and platforms.
- Validated responsive and cross-browser behavior across Chrome, Firefox, Safari, and Edge to identify inconsistent user experiences.
- Created reproducible Jira defect reports with environment details and business impact; collaborated with developers to investigate causes and verify fixes.
- Used SQL data checks alongside application validation to investigate discrepancies and verify expected results.
- Supported smoke, regression, and sanity checks across development, QA, UAT, and staging environments, including deployment checks and hotfix verification.

Selected project

Portfolio & Career Content System: Built a React/Untitled UI portfolio from validated JSON, with shared PDF/Word generation and static deployment packaging for Cloudflare. mohamedmoheyeldin.com

Technical skills

Application development: React, TypeScript, JavaScript, Java, Reusable components

Data and integration: SQL, MySQL, JSON, REST APIs, Postman, SQL Server, Oracle, MongoDB

Delivery and quality: Playwright, GitHub Actions, Git, Jira, Jenkins, AWS EC2/S3/Aurora test environments

AI-assisted engineering: GitHub Copilot, VS Code, GPT models, Claude, Gemini

Education

Bachelor's degree in Computer Science | American College of Commerce and Technology | May 2014

Professional development

Implementing SAFe 5.1 course completion, 2021 (historical course completion)

Leading SAFe 4.0 course completion, 2016 (historical course completion)
